Problem Statement

The Calendar class is an abstract class that provides methods for converting between a specific instant in time and a set of calendar fields such as YEAR, MONTH, DAY_OF_MONTH, HOUR, and so on, and for manipulating the calendar fields, such as getting the date of the next week.

You are given a date. You just need to write the method, , which returns the *day* on that date. To simplify your task, we have provided a portion of the code in the editor.

Example

The method should return as the day on that date.

AUGUST 2017

SUN	MON	TUE	WED	THU	FRI	SAT
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30	31		

Function Description

Complete the *findDay* function in the editor below.

findDay has the following parameters:

- *int:* month
- *int:* day
- *int:* year

Returns

- *string:* the day of the week in capital letters

Input Format

A single line of input containing the space separated month, day and year, respectively, in format.

Constraints

-

Program:

```
import java.io.*;
import java.util.*;

class Result {

  /*
   * Complete the 'findDay' function below.
   *
   * The function is expected to return a STRING.
   * The function accepts following parameters:
   *  1. INTEGER month
   *  2. INTEGER day
   *  3. INTEGER year
   */

  public static String findDay(int month, int day, int year) {
    Calendar calendar = Calendar.getInstance();
    // Calendar months are 0-based (January = 0), so subtract 1
    calendar.set(year, month - 1, day);

    int dayOfWeek = calendar.get(Calendar.DAY_OF_WEEK);

    String[] days = {
      "SUNDAY", "MONDAY", "TUESDAY", "WEDNESDAY",
      "THURSDAY", "FRIDAY", "SATURDAY"
    };

    return days[dayOfWeek - 1];
  }
```

```
}

public class Solution {

   public static void main(String[] args) throws IOException {

      BufferedReader bufferedReader = new BufferedReader(new
InputStreamReader(System.in));

      BufferedWriter bufferedWriter = new BufferedWriter(new
FileWriter(System.getenv("OUTPUT_PATH")));

      String[] firstMultipleInput = bufferedReader.readLine().replaceAll("\\s+$", "").split(" ");

      int month = Integer.parseInt(firstMultipleInput[0]);

      int day = Integer.parseInt(firstMultipleInput[1]);

      int year = Integer.parseInt(firstMultipleInput[2]);

      String res = Result.findDay(month, day, year);

      bufferedWriter.write(res);

      bufferedWriter.newLine();

      bufferedReader.close();

      bufferedWriter.close();

   }

}
```

Sample Input

08 05 2015

Sample Output

WEDNESDAY
