Problem Statement

Given a date, return the corresponding day of the week for that date.

The input is given as three integers representing the day, month and year respectively.

Return the answer as one of the following values {"Sunday", "Monday", "Tuesday", "Wednesday", "Thursday", "Friday", "Saturday"}.

Note: January 1, 1971 was a Friday.

Program:

```
import java.time.LocalDate;

import java.time.DayOfWeek;

class Solution {

  public String dayOfTheWeek(int day, int month, int year) {

    // Create LocalDate object from input

    LocalDate date = LocalDate.of(year, month, day);

    // Get the day of the week

    DayOfWeek dayOfWeek = date.getDayOfWeek();

    // Return the day name with first letter capitalized

    String result = dayOfWeek.toString().substring(0,1).toUpperCase()

            + dayOfWeek.toString().substring(1).toLowerCase();

    return result;

  }

  public static void main(String[] args) {

    Solution sol = new Solution();

    // Example 1

    System.out.println(sol.dayOfTheWeek(31, 8, 2019)); // Output: Saturday
```

```
        // Example 2
        System.out.println(sol.dayOfTheWeek(18, 7, 1999)); // Output: Sunday

        // Example 3
        System.out.println(sol.dayOfTheWeek(15, 8, 1993)); // Output: Sunday
    }
}
```

Input: day = 31, month = 8, year = 2019

Output: "Saturday"
