Problem Statement

Sometimes it's better to use dynamic size arrays. Java's Arraylist can provide you this feature. Try to solve this problem using Arraylist.

You are given lines. In each line there are zero or more integers. You need to answer a few queries where you need to tell the number located in position of line.

Take your input from System.in.

Input Format
The first line has an integer . In each of the next lines there will be an integer denoting number of integers on that line and then there will be space-separated integers. In the next line there will be an integer denoting number of queries. Each query will consist of two integers and .

Constraints

-
-
-
-

Each number will fit in signed integer.
Total number of integers in lines will not cross .

Output Format
In each line, output the number located in position of line. If there is no such position, just print "ERROR!"

Sample Input

5

5 41 77 74 22 44

1 12

4 37 34 36 52

0

3 20 22 33

5

1 3

3 4

3 1

4 3

5 5

Sample Output

74

52

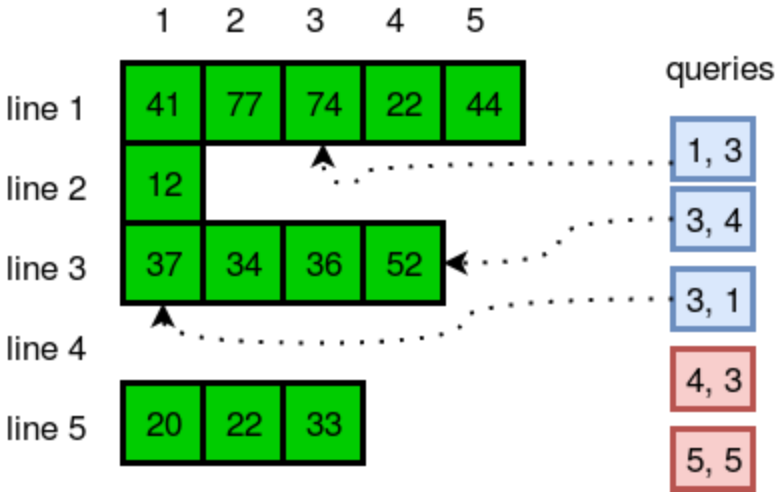

37

ERROR!

ERROR!

Explanation

The diagram below explains the queries:

Program:

```
import java.util.*;

public class Solution {
   public static void main(String[] args) {
      Scanner sc = new Scanner(System.in);

      int n = sc.nextInt(); // number of lines
      List<List<Integer>> listOfLists = new ArrayList<>();

      // Read n lines
      for (int i = 0; i < n; i++) {
         int d = sc.nextInt(); // number of integers in this line
         List<Integer> line = new ArrayList<>();
```

```
        for (int j = 0; j < d; j++) {
            line.add(sc.nextInt());
        }
        listOfLists.add(line);
    }

    int q = sc.nextInt(); // number of queries
    for (int i = 0; i < q; i++) {
        int x = sc.nextInt(); // line number
        int y = sc.nextInt(); // position in line

        // Check if valid
        if (x <= listOfLists.size() && y <= listOfLists.get(x - 1).size()) {
            System.out.println(listOfLists.get(x - 1).get(y - 1));
        } else {
            System.out.println("ERROR!");
        }
    }

    sc.close();
  }
}
```

Sample Input

```
5
5 41 77 74 22 44
1 12
4 37 34 36 52
0
3 20 22 33
5
1 3
```

3 4

3 1

4 3

5 5

Sample Output

74

52

37

ERROR!

ERROR!
